

GOLF COURSE GREEN - RUBY HILL GOLF COURSE, PLEASANTON, CA

PRODUCT: WB 24

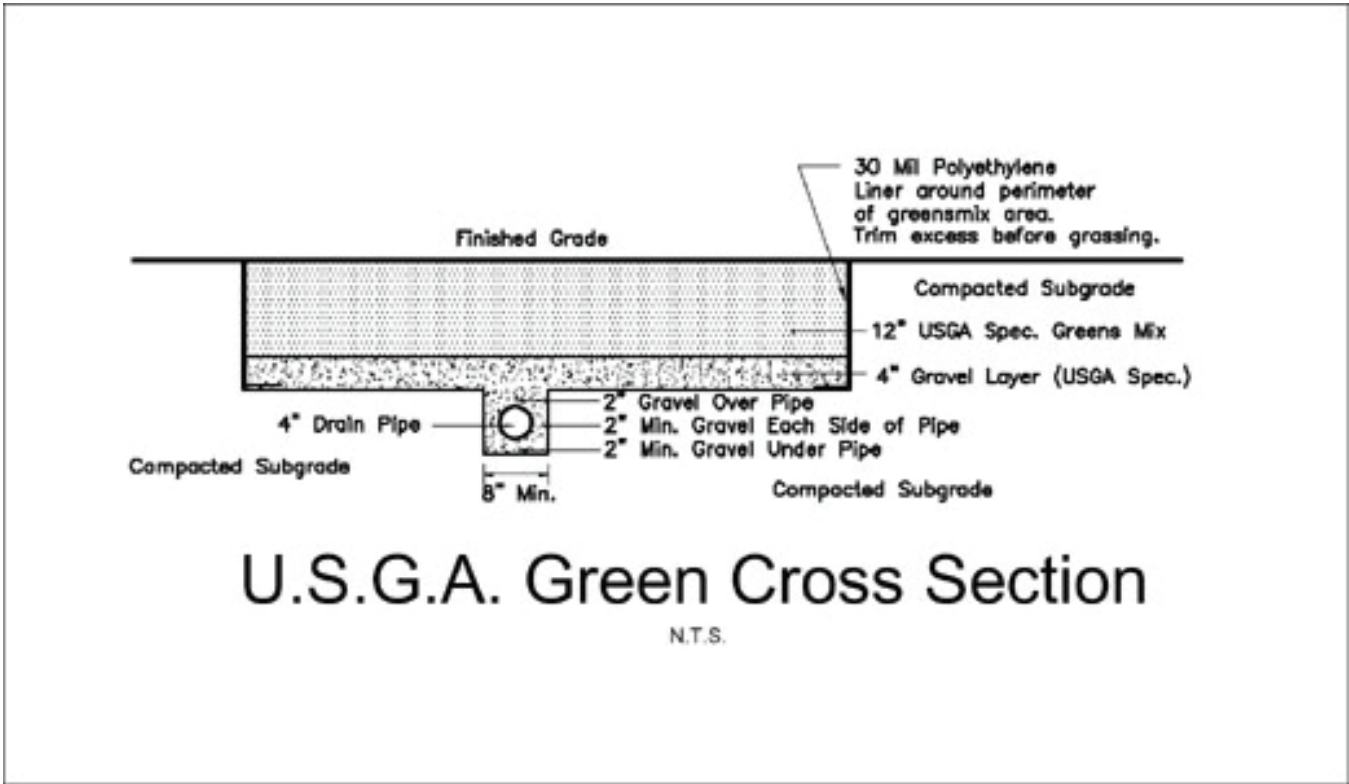

Concerned about the long term health and maintenance of the greens at the Jack Nicklaus designed Ruby Hill Golf Club in Pleasanton, California, the architects needed a solution to address three key issues:

- Soil separation between the greens mix and native soil
- Preventing root and grass invasion of the green
- Maintaining the moisture equilibrium of the intensively irrigated green

By lining the outside of the green with DeepRoot WB 24-2 all three key issues were addressed.

WB Installation - 1996
